

Training as a tool for change towards collaborative science

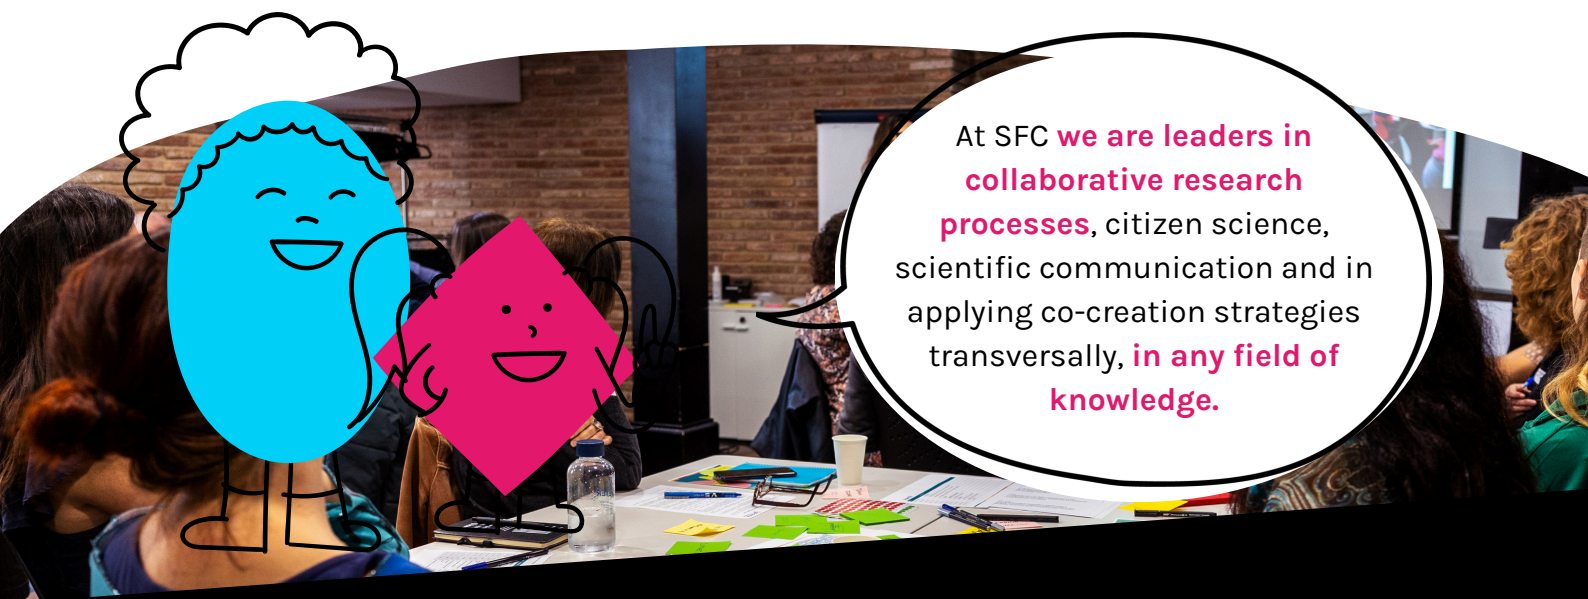

The challenges we face today as society are **complex** and **multidimensional**.

In order to develop new knowledge that helps solve, mitigate or prevent these problems, it is necessary to reformulate the traditional research paradigm and work in a transdisciplinary way to incorporate the knowledge of the people who can theorize about solutions, as well as the people who can put them into practice and the people affected by the proposed solutions. The European Commission has introduced cocreation and citizen participation transversally in

Horizon Europe to solve social challenges and increase the impact of research aligned with the needs of society.

Managing collaborative research projects is not a simple task.

To be able to do so, it is necessary to train, mobilize and develop a series of skills and knowledge **as a whole** on which it depends whether research is successful, rigorous, integrative of different perspectives and productive with respect to viable solutions with **social impact**.

At SFC **we are leaders in collaborative research processes**, citizen science, scientific communication and in applying co-creation strategies transversally, **in any field of knowledge**.

Discover the SFC Academy and take the first step with Science For Change to train you in collaborative research and open & participatory science!

Ho *cocreem* tot amb agents clau per garantir l'èxit i l'acceptació social dels teus resultats d'investigació

How can we help?

Our trainings are not like the usual ones... We use a learning by doing and co-creation methodology, based on practical exercises and real success cases.

- We offer **ad-hoc training, mentoring and consulting** in all our areas of knowledge such as citizen science, collaborative research, science communication, cocreation and science to policy.
- We help you **apply and test** competency frameworks in **collaborative research**, such as those promoted by the Joint Research Centre or the School of Public Administration of Catalonia, for the analysis and development of competencies of your research teams.

Ask for more information about our training plans and services to take your first step towards change.
