

# Citizen science and co-creation as an engine of change towards sustainability

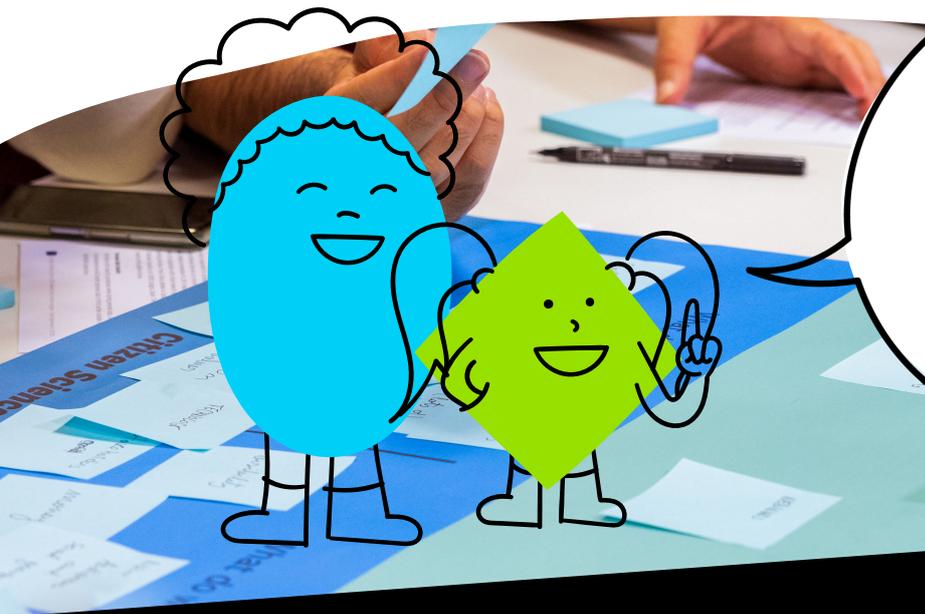

Achieving sustainable development objectives not only requires technological innovations and processes but also a deep **change in the economic, social and political model** through the involvement of different agents.

For this change in model to occur, **greater collaboration** is necessary between the research sector, companies and public administration, and, above all, the **inclusion of citizens** in debates and decision-making.

Their active participation promotes a sense of co-responsibility and encourages behavioural change.

The promotion of environmental education, citizen participation in the generation of knowledge and the co-definition of more effective policies and initiatives has become a **necessity**.

It is everyone's responsibility to preserve our planet for future generations.

At **SFC**, we apply citizen science and co-creation strategies emerge as innovative tools to **advance towards sustainability**, in a collaborative way.

Start your path towards social innovation  
with Science For Change

We co-create everything with key agents to ensure success and social acceptance of our projects

## ¿How can we help you?

- We facilitate the **co-design of sustainability and circular economy strategies** between different agents involved.
- We design, implement, advise and train in projects of **citizen science and collaborative science**.
- We carry out **diagnoses, studies and development of technical tools** environmental from a **social and participatory** point of view.
- We apply **co-design techniques in technological developments** in the environmental field.
- We organize **participatory science education workshops** to raise awareness of environmental problems to codesign data collection tools.
- We use innovative **communication and artistic techniques** to visualize results and increase their **social impact**.
